Back-end Development:	NodeJS, Laravel, ASP .NET Core, Flask
Mobile Application Development:	React Native
Databases:	MySQL, SQLite, Postgres, MongoDB
DevOps & Tools:	AWS, MS Azure, GCP, Git, Jenkins, Docker, Postman

## PROJECTS

### WakeUpBruh

[wakeupbruh.com](http://wakeupbruh.com)

I used the LAMP stack to build a simple and fun wake-up dialer service. It utilizes the Vonage API for making calls, Twilio for SMS verification, and Stripe for handling payments.

### The KANE Project

[kaneproject.ca](http://kaneproject.ca)

For our Capstone Project we built a rental listings service for newcomers to Canada. Our group used the LAMP stack to build the web app, the Stripe API for payments, and AWS for infrastructure.

### KxHTTP

[kxhttp.org](http://kxhttp.org)

A simple HTTP requests CLI client for quick and easy API testing. I personally use this tool to test my RESTful APIs. Built with C/C++ and cpphttplib.

### Minimati

[github.com/kiduswb/minimati](https://github.com/kiduswb/minimati)

A simple headless CMS for adding blogging functionality to static websites. Built with pure PHP & MySQL.
